

Coffee Shop Sales Analysis

Key Findings & Actionable Insights — January to June 2023

This report summarizes the answers uncovered from analyzing 149,116 transaction line items across three store locations (Astoria, Hell's Kitchen, and Lower Manhattan) covering the period January through June 2023. The goal: identify when customers buy, what they buy, and where the business can act to grow revenue.

Metric	Value
Total Revenue	\$698,812.33
Total Transactions	149,116
Total Units Sold	214,470
Average Revenue per Transaction	\$4.69
Stores Analyzed	3 (Astoria, Hell's Kitchen, Lower Manhattan)
Period Covered	Jan 2023 – Jun 2023

Below are the answers to each question the analysis set out to solve, supported by the underlying data.

1. How do sales vary by day of the week and hour of the day?

Are there any peak times for sales activity?

Revenue by hour of day, all stores combined.

Sales are heavily concentrated in the morning. The 8 AM–11 AM window alone generates roughly 44% of total daily revenue, with 10 AM the single highest-revenue hour (\$88,673) followed closely by 9 AM (\$85,170) and 8 AM (\$82,700). Activity drops off sharply after 11 AM, settles into a steady midday/afternoon plateau (~\$40K per hour band from 12 PM to 5 PM), and tapers off in the evening.

Day-of-week revenue is far more even: every day falls within a narrow \$96,900–\$101,700 band. Monday is the highest-revenue day (\$101,677) and Saturday the lowest (\$96,894) — but the gap between the busiest and quietest day is under 5%, meaning the coffee shop does not have a 'slow day' problem. It has a 'slow hours' problem.

Actionable takeaway: Staffing, inventory prep, and promotions should be built around the daily 8–11 AM rush rather than around any particular weekday. Off-peak hours (12 PM–7 PM) are prime targets for traffic-driving promotions (e.g. lunch combos, afternoon discounts) to flatten the demand curve.

2. What is the total sales revenue for each month?

Monthly revenue trend, January–June 2023.

Month	Revenue
January	\$81,677.74
February	\$76,145.19
March	\$98,834.68
April	\$118,941.08
May	\$156,727.76
June	\$166,485.88

Revenue more than doubled over the half-year, climbing from \$81,678 in January to \$166,486 in June — a 104% increase. February dipped slightly below January, but from March onward growth has been consistent and accelerating month over month, with the steepest jumps in April and May.

Actionable takeaway: The upward trend suggests the business is in a genuine growth phase rather than a seasonal blip lasting only one month. It's worth investigating what changed operationally or in marketing from March onward to replicate and reinforce those drivers going into the second half of the year.

3. How do sales vary across different store locations?

Store Location	Revenue	Transactions
Hell's Kitchen	\$236,511.17	50,735
Astoria	\$232,243.91	50,599
Lower Manhattan	\$230,057.25	47,782

Performance across the three locations is remarkably balanced — each store contributes roughly a third of total revenue, with less than 3% separating the top and bottom performer. Hell's Kitchen edges out the other two on both revenue and transaction count.

Actionable takeaway: No location is underperforming enough to warrant red-flag attention, but Lower Manhattan's slightly lower transaction count (47,782 vs. ~50,600+ for the other two) is worth a closer look — it could reflect foot traffic, store hours, or local competition.

4. What is the average price per order (per person)?

Metric	Value
Average revenue per transaction	\$4.69
Total revenue	\$698,812.33
Total transactions	149,116

Each recorded transaction line averages \$4.69 in value — consistent with a single coffee, tea, or bakery item purchase rather than a multi-item basket. This is a useful baseline: any initiative that increases items per visit (e.g. pairing a bakery item with a drink) has direct, measurable upside on this number.

Actionable takeaway: A modest uplift in average order value — through bundling, upsized drink prompts, or bakery add-on suggestions at checkout — would compound across all 149K+ transactions and meaningfully move total revenue.

5. Which products are best-selling in terms of quantity and revenue?

Top 5 products by quantity sold

Product	Units Sold
Ethiopia (coffee)	13,271
Our Old Time Diner Blend	13,074
Columbian Medium Roast	13,068
Brazilian	13,012
Jamaican Coffee River	12,431

Top 5 products by revenue

Product	Revenue
Ethiopia (coffee)	\$42,304.10
Sustainably Grown Organic	\$39,065.10
Jamaican Coffee River	\$38,781.15
Brazilian	\$37,746.50
Latte	\$36,369.75

Coffee bean varieties dominate both lists, with Ethiopia the single best performer on both units sold and revenue generated. Notably, the top 5 by quantity are almost all whole coffee blends, while Latte cracks the revenue top 5 despite lower unit counts — a sign of its higher price point per cup.

Actionable takeaway: Ethiopia, Jamaican Coffee River, and Brazilian are reliable anchor products — worth guaranteeing stock availability and giving prominent shelf/menu placement. Latte's strong revenue-per-unit suggests opportunity to promote similar higher-margin espresso drinks more aggressively.

6. How do sales vary by product category and type?

Revenue by product category.

Category	Revenue	Share of Total
Coffee	\$269,952.45	38.6%
Tea	\$196,405.95	28.1%
Bakery	\$82,315.64	11.8%
Drinking Chocolate	\$72,416.00	10.4%
Coffee Beans	\$40,085.25	5.7%
Branded	\$13,607.00	1.9%
Loose Tea	\$11,213.60	1.6%
Flavours	\$8,408.80	1.2%
Packaged Chocolate	\$4,407.64	0.6%

Coffee and Tea together account for roughly two-thirds (66.7%) of all revenue, confirming these are the core categories the business is built on. Bakery and Drinking Chocolate form a meaningful secondary tier (~22% combined), while packaged retail items (beans, branded goods, loose tea, flavours, packaged chocolate) make up a small long tail of the business.

Actionable takeaway: Coffee and Tea should remain the marketing and inventory priority, but the long tail of retail/packaged categories represents an underdeveloped upsell opportunity — e.g. promoting take-home coffee beans to regular in-store coffee drinkers.

Summary: What This Analysis Solves

Taken together, these findings answer the core operational questions a coffee shop owner or manager needs to run the business more efficiently:

- **When to staff up:** The 8–11 AM window drives ~44% of daily revenue — staffing and prep should peak here.
- **Where the growth is coming from:** Revenue has grown 104% from January to June, with consistent month-over-month acceleration since March.
- **Whether locations are balanced:** All three stores perform within 3% of each other — no single location is a problem area.
- **What the average customer spends:** \$4.69 per transaction — a clear baseline for testing upsell and bundling strategies.
- **What to always keep in stock:** Ethiopia, Jamaican Coffee River, Brazilian, and Columbian Medium Roast are the top-performing products by both volume and revenue.
- **Where the real money is:** Coffee and Tea combined drive two-thirds of revenue, with a long tail of retail categories offering untapped upsell potential.

Data source: 149,116 transaction records across Astoria, Hell's Kitchen, and Lower Manhattan locations, January–June 2023.
